

Meta Pixel Troubleshooting — Directions for Netlify Support

Issue Summary

Meta Pixel (ID: 224071631616393932) is **not firing** on the live site (<https://insureprotector.com>), even though pixel code has been added to HTML pages and an Edge Function has been deployed.

Test Result: Browser console returns `fbq is NOT defined` when visiting <https://insureprotector.com>

What We've Already Done

1. Pixel Code Added to HTML Pages

The following files have Meta Pixel code in the `<head>` section:

- `index.html`
- `index-old.html`
- `sms-opt-in.html`
- `privacy.html`
- `terms.html`

Pixel Code Format:

HTML

```
<!-- Meta Pixel Code -->
<script>
  !function(f,b,e,v,n,t,s )
  {if(f.fbq)return;n=f.fbq=function(){n.callMethod?
  n.callMethod.apply(n,arguments):n.queue.push(arguments)};
  if(!f._fbq)f._fbq=n;n.queue=[];t=b.createElement(e);t.async=!0;
  t.src=v;s=b.getElementsByTagName(e)[0];
  s.parentNode.insertBefore(t,s)}(window, document, 'script',
  'https://connect.facebook.net/en_US/fbevents.js' );
  fbq('init', '224071631616393932');
  fbq('track', 'PageView');
</script>
<!-- End Meta Pixel Code -->
```

2. Netlify Edge Function Deployed

File: `netlify/edge-functions/meta-pixel.ts`

Purpose: Inject pixel code as a CDN-level fallback if HTML pages don't include it

Configuration: Edge Function should run on all routes

Troubleshooting Steps for Netlify Support

Step 1: Verify HTML Pages Include Pixel Code

Action: Check if the Meta Pixel code is actually present in the deployed HTML files.

How to verify:

1. Go to <https://insureprotector.com>
2. Right-click → **View Page Source** (or press Ctrl+U)
3. Search for `fbq` in the page source
4. **Expected result:** Should find the pixel initialization code with ID `224071631616393932`

If NOT found: The pixel code is not being deployed. Possible causes:

- Build process is stripping the code
 - HTML files are being cached without the pixel
 - Deployment didn't include the updated files
-

Step 2: Check Edge Function Status

Action: Verify the Netlify Edge Function is active and running.

How to check:

1. Log into Netlify dashboard
2. Go to **Site settings** → **Edge Functions**
3. Confirm `meta-pixel.ts` is deployed and active
4. Check deployment logs for any errors

If Edge Function is not active:

- Redeploy the Edge Function
- Check for TypeScript compilation errors
- Verify the function has proper route configuration

Step 3: Check for Content Security Policy (CSP) Blocking

Action: Verify CSP headers are not blocking the Meta Pixel script.

How to check:

1. Open browser DevTools (F12)
2. Go to **Console** tab
3. Look for any errors mentioning:
 - Content Security Policy
 - connect.facebook.net
 - fbevents.js

If CSP is blocking the pixel:

- Add `https://connect.facebook.net` to CSP `script-src` directive
- Add `https://connect.facebook.net` to CSP `connect-src` directive

Example CSP header to add:

Plain Text

```
script-src 'self' 'unsafe-inline' https://connect.facebook.net;  
connect-src 'self' https://connect.facebook.net;
```

Step 4: Check Browser Console for Errors

Action: Look for JavaScript errors that might be preventing pixel initialization.

How to check:

1. Open browser DevTools (F12)
2. Go to **Console** tab
3. Reload the page (Ctrl+R)
4. Look for any red error messages

Common errors:

- Uncaught ReferenceError: fbq is not defined — Pixel code not loading
 - Failed to load resource: the server responded with a status of 404 — Script file not found
 - Refused to load the script — CSP or CORS issue
-

Step 5: Check Network Requests

Action: Verify the pixel script is actually being requested and loaded.

How to check:

1. Open browser DevTools (F12)
2. Go to **Network** tab
3. Reload the page (Ctrl+R)
4. Search for `fbevents.js`

Expected result: Should see a request to `https://connect.facebook.net/en_US/fbevents.js` with status **200 OK**

If NOT found:

- The pixel code is not in the HTML
 - The script URL is incorrect
 - The page is being cached without the pixel
-

Step 6: Check for Caching Issues

Action: Clear Netlify cache and redeploy.

How to clear cache:

1. Go to Netlify dashboard
 2. Go to **Deploys**
 3. Click **Trigger deploy** → **Clear cache and redeploy**
 4. Wait for deployment to complete
 5. Test again at <https://insureprotector.com>
-

Step 7: Verify Pixel ID is Correct

Action: Confirm the pixel ID in the code matches Meta Events Manager.

Our Pixel ID: `224071631616393932`

How to verify in Meta:

1. Go to Meta Events Manager (events.facebook.com)
2. Find "WS - Gregory M Sloan Pixel"
3. Confirm the ID matches `224071631616393932`

If ID doesn't match:

- Update the pixel code with the correct ID
 - Redeploy to Netlify
-

Quick Test After Fix

Once Netlify confirms the fix, test with this command in browser console:

JavaScript

```
typeof fbq !== 'undefined' ? console.log('✓ Pixel is ACTIVE') : console.log('X')
```

Expected output: ✓ Pixel is ACTIVE

Escalation Path

If Netlify support cannot resolve this, ask them to:

1. **Check deployment logs** for any build errors related to HTML processing
 2. **Verify the Edge Function is running** on all routes (not just specific paths)
 3. **Check Netlify's cache behavior** — is it caching old HTML without the pixel?
 4. **Test with a direct HTML file** — create a simple test.html with just the pixel code
 5. **Check for any Netlify plugins** that might be stripping or modifying HTML
-

What We Need From Netlify

Please provide:

1. **Confirmation that pixel code is in deployed HTML files**
 2. **Edge Function deployment status and logs**
 3. **Any CSP or security headers that might block the pixel**
 4. **Network request logs showing fbevents.js being loaded**
 5. **Deployment history showing when pixel code was added**
-

Reference Information

- Site URL: <https://insureprotector.com>

- **Meta Pixel ID:** 224071631616393932
 - **Pixel Name in Meta:** "WS - Gregory M Sloan Pixel"
 - **Affected Pages:** index.html, index-old.html, sms-opt-in.html, privacy.html, terms.html
 - **Edge Function:** netlify/edge-functions/meta-pixel.ts
 - **Current Status:** Pixel code not firing (fbq undefined)
-

Contact Information

For questions about this implementation:

- Agent: Gregory M Sloan, CLU®, ChFC®
 - Email: [Your email]
 - Phone: (808) 207-8376
-

Timeline: This needs to be resolved ASAP as we're launching Facebook ad campaigns that depend on pixel tracking for conversion measurement.
